Dolphin Finance For Nature

- SAVE THE NATURE - SAVE THE WORLD - SAVE THE FUTURE -

Our goal is to take blockchain technology one step further. By doing it this way... No, no.

Our aim is not to contribute to the blockchain, we aim to help organizations that help solve the problems in the world.

In order to make the world more livable, we aim to use blockchain technology and establish a network of cooperation. This way both the investors and the world will win. What could be more pleasing than this? Air pollution, environmental pollution, soil pollution, sea and water pollution, waste, drought, hunger, viruses and diseases, endangered animals... Sounds like we have lots of problems, doesn't it? These are to name a few. So, what are we going to do about it? How are we going to do it? We have explained this on the following pages, please read them.

Having said all of this, we would like to thank the Safemoon software developers and team for presenting us such a smart contract.

Come and join us. Let's help build a better world together..

Dolphin Finance For Nature

- SAVE THE NATURE - SAVE THE WORLD - SAVE THE FUTURE -

The main problems that we will fight against collectively in order to make the world more inhabitable are as follows:

- Air pollution
- Environmental pollution
- Soil pollution
- Sea pollution
- Wastes,
- Forest fires and destruction
- Endangered animals
- Destruction of animals' habitats
- Viruses and diseases
- Drought
- Hunger
- Poverty
- War

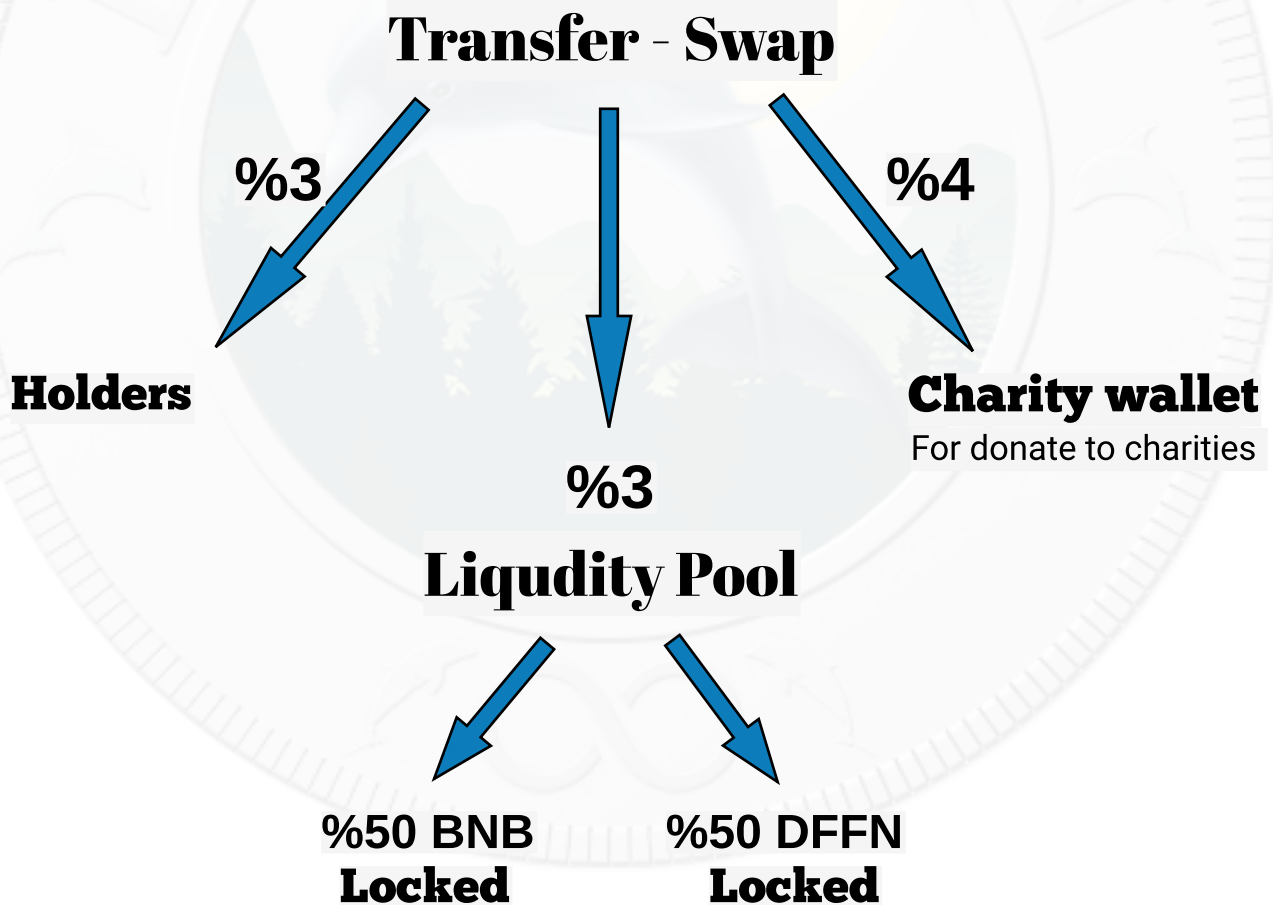

So, what are we going to do about them?

We will contact local and global charities directly or indirectly, purchase the DFFNs accumulated in our donation wallet ourselves, and then donate to the necessary places. We will share the receipt of each donation we make with you both on our website and through all our social network platforms. We will make agreements with various charities. We will conduct surveys on various social platforms. We will donate to the charities you have chosen by looking at the results of the surveys we will make. In addition, we will establish a representational network in every country with people who are devoted to helping like us. We will have a representative that people in every country can reach, which will make it easier to track the donations made. We will have the opportunity to reach organizations that need help more easily. This is the reason you should contact us. Let's create a big and unselfish help network together so that we can create a more inhabitable world. We will be genuine and frank. We will share every step we take with you immediately. We will share with you every institution we meet and our correspondence. When we establish a partnership, we will share on all our social platforms simultaneously. You will be able to reach us at any time and share your problems and requests with us. If there is an organization, community, or person in your country that we need to help, informing us will be enough.

Dolphin Finance For Nature

- SAVE THE NATURE - SAVE THE WORLD - SAVE THE FUTURE -

Transactions

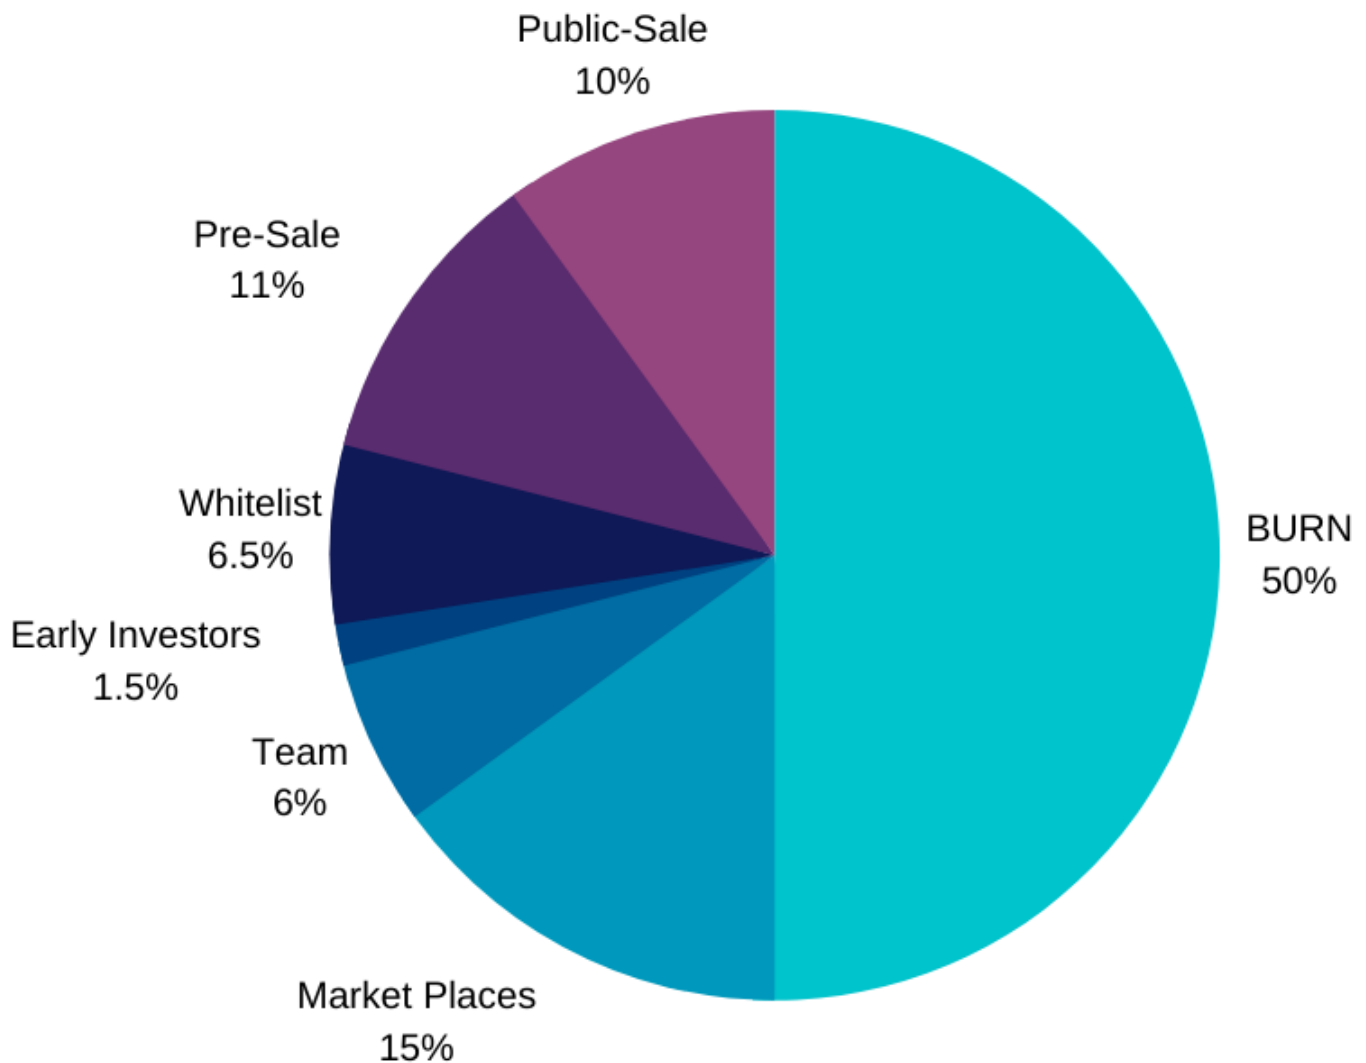

3% holders, 3% liquidity pool and 4% donation wallet on every transaction

Dolphin Finance For Nature

- SAVE THE NATURE - SAVE THE WORLD - SAVE THE FUTURE -

Token Economics

MAX. TOTAL SUPPLY : 365,000,000,000 DFFN

- %50 BURN - when the whitelist applications are finished
- Market Places : Locked 6 Years (24 pieces - per 3 months unlock)
- Team Locked 1 Year (per 6 months unlock)
- Whitelist - Token distribution 6 hours after public sale
- Pre-Sale: As soon as the pre-sale ends, the public sale will start
- Public-Sale : 5 years locked in liquidity pool

Dolphin Finance For Nature

- SAVE THE NATURE - SAVE THE WORLD - SAVE THE FUTURE -

This makes it possible for B to call back into A before this interaction is completed.

Use of “require” function in this smart contract mitigated this vulnerability.

- **Forcing Ethereum to a contract**

While implementing “selfdestruct” in smart contract, it sends all the ethereum to the target address. Now, if the target address is a contract address, then the fallback function of target contract does not get called. And thus Hacker can bypass the “Required” conditions. Here, the Smart Contract’s balance has never been used as guard, which mitigated this vulnerability.

- **Good things in smart contract**

- **SafeMath library:-**

- You are using SafeMath library it is a good thing. This protects you from underflow and overflow attacks.

```
100 * library SafeMath {
101 * /**
102 *  * @dev Returns the addition of two unsigned integers, with an overflow flag.
103 *  *
104 *  * Available since v3.4.
```

- **Good required condition in functions:-**

- Here you are checking that balance of the contract is bigger or equal to the amount value and checking that token is successfully transferred to the recipient's address.

```
374 *     function sendValue(address payable recipient, uint256 amount) internal {
375 *         require(address(this).balance >= amount, "Address: insufficient balance")
376 *
377 *         // solhint-disable-next-line avoid-low-level-calls, avoid-call-value
378 *         (bool success, ) = recipient.call{ value: amount }("");
379 *         require(success, "Address: unable to send value, recipient may have reverted");
```

- Here you are checking that the contract has more or equal balance then value, target address is contract address or not.

```
435 *     function functionCallWithValue(address target, bytes memory data, uint256 value) public {
436 *         require(address(this).balance >= value, "Address: insufficient balance for call");
437 *         require(isContract(target), "Address: call to non-contract");
438 *         (bool success, ) = target.call{ value: value }(data);
```

Dolphin Finance For Nature

- SAVE THE NATURE - SAVE THE WORLD - SAVE THE FUTURE -

J.Nelson - Canada

Hello, I am a volunteer working for nature. When I wanted to build the DFFN project, I needed a big team for it. I talked to many of my friends about this. How can we make this project global? Then, as a result of my research, we thought that the best way to do this would be with tokens. For this reason, we started our DFFN project by meeting with various institutions and organizations.

I hope we can create a much more livable world for everyone.

Thanks.

S.Avci - Turkey

Hello, I am very happy to be a part of this project. I am not a software developer or designer. I am just someone who loves nature and works for nature. Jesus is my friend. Jesus asked me if I would be involved in this project, he talked about the project. I accepted and started my duty as a Turkey representative. It would be wrong not to accept this project when there are so many issues to help in Turkey. I think it will be good for both the world and our country. hope everything will be fine

B. Malhotra - India

Hello, I am a software developer working on blockchain for 5 years. I am very happy to be in the DFFN project. Thanks.

S. Bawa - India

I am a person who has been dealing with various software languages for a long time and has mastered ethereum and bsc network. I do web design and software works on various platforms as a freelancer. The DFFN project is exciting for me. I think it will be very good.
